<u>Documentation REPORT</u>

Medicare Telemedicine Platform documentation

Introduction:

- ➢ Welcome to the Medicare Telemedicine Platform documentation. Medicare is a web-based healthcare application designed to facilitate remote consultations between healthcare providers and patients. In response to the growing need for accessible healthcare services, our platform prioritizes user-friendly interfaces, supporting seamless video calls, and secure data sharing.

  - **Telemedicine Platforms:** Enable remote consultations through a user-friendly interface.
  - **Video Calls:** Facilitate real-time communication between healthcare providers and patients.
  - **Data Sharing:** Ensure secure sharing of medical information during remote consultations.

  This documentation will guide you through the setup and usage of the Medicare platform, allowing you to experience the benefits of telemedicine in a streamlined manner.

Running Apache and MySQL Servers:

- To get started with the Medicare Telemedicine Platform, you need to set up the database. Follow these steps:

  1. Open the XAMPP Control Panel (you can find it in the installation directory or through the Start menu shortcut).
  2. Locate the "Apache" module in the list.
  3. Click the "Start" button next to "Apache" to initiate the Apache server.
  4. If successful, you should see the status change to "Running" next to the Apache module.

- Mysql same as above

Setting Up the Database:

To get started with the Medicare Telemedicine Platform, you need to set up the database. Follow these steps:

1. Open your preferred database management tool (e.g., MySQL Workbench).
2. Create a new database named 'medicare_db' if you haven't already.
3. Navigate to the 'medicare_db' database.
4. Import the database dump file(Manual Import via GUI)
